

CELL-O EZ™ II Air Cushion Machine ..the value added machine

Convenient tabletop unit produces air cushions on demand. CELL-O EZ II uses ambient air so compressed air is not required. Operation is simple...plug it in and turn it on...it's ready to produce air cushions. The CELL-O EZ II machine weighs approximately 40 kilos and produces air cushions on demand.

The CELL-O EZ II machine fills pre-perforated, cross-sealed film with air and applies a single continuous seal. Small enough to fit anywhere, the self-contained CELL-O EZ II unit is easy to use with simple and quick loading of film. The machine is fast and virtually maintenance free.

The CELL-O EZ II machine makes continuous chains of perforated air cushions in an infinite variety of sizes, tailored to customers' requirements. Currently, four sizes are offered:
200mm x 65mm long
200mm x 130mm long
400mm x 80mm long
200mm x 200mm long
Perforations between each cushion provide quick separation of the number of cushions needed.

CELL-O EZ II is the perfect cushion pack system for warehouses, distribution centres and start-up operations. The CELL-O EZ II machine is available from our distributor network.
